

Uma breve história das máquinas informacionais

Câmara escura. Aristóteles (384-322 ac) já entendia o princípio. No século XI Alhazen contribuiu para seu desenvolvimento. Em 1490 Leonardo Da Vinci fez descrições sobre ele e em 1558 Giovanni Battista Della Porta recomendava seu uso para o treino do desenho. Quem a batizou com este nome foi Johannes Kepler, no século XVII.

Máquina de calcular de Da Vinci

Lanterna mágica séc XVII

Phantasmagoria século XIX.

A primeira fotografia foi feita por Joseph Nicéphore Niépce em 1827. Em 1883 George Eastman lançou o primeiro filme seco e flexível e a primeira câmera da Kodak em 1888.

Eadweard Muybridge fez seus primeiros experimentos em 1872, dando início ao desenvolvimento do Kinetoscópio de **Thomas Alva Edison em 1891, graças à invenção da lâmpada em 1878.**

[imagens\Muybridge.html](#)

[imagens\mareys-dropcat.mov](#)

Nesta época Edison também inventou o fonógrafo, primeiro gravador de som (que foi seguido pelo Gramophone de Emile Berliner) e o telefone (1875), que também foi desenvolvido por Bell.

[diagramas-fernando\bell_lq.mov](#)
[diagramas-fernando\telephone1929.mov](#)

A câmera e o projetor de cinema tomam forma com a invenção do cinematógrafo de Louis Lumière em 1894 e a primeira projeção pública do filme “L'Arrivée d'un train en gare de la Ciotat” de Georges Méliès.

1898 – Gravação de som em fio - Dane Valdemar Poulsen

1901 - Gravação óptica do som (cinema)

1902 Méliè “Viagem à lua” – truques de montagem e pintura sobre a película.

1903 Edwin Porter “The great Train Robbery” – Montagem de closes e planos abertos.

1914 Charlie Chaplin com “O pequeno vagabundo” e D.W. Griffith desenvolve os primeiros esboços da “gramática do cinema” (montagem paralela).

1924 Sergei Eisenstein “A Greve” – Montagem intelectual e outras contribuições.

O som só foi se incorporar ao cinema na década de 1920 depois da invenção do processo Vitaphone utilizado pelo famoso “The Jazz Singer” de 1927 e do desenho animado da Disney “Steamboat Willie” de 1928, o primeiro filme com áudio dublado.

[diagramas-fernando\vitaphone_sm1926.mov](#)

1929 – Transmissão de TV mecânica (30 linhas) pela BBC até 1935.

1932 – introdução do technicolor e da celulóse

1933 – gravação de som em fita magnética - BASF

1936 – primeiras TV's eletrônicas (200 linhas)

[imagens\emitron_brochure.html](#)
[imagens\ge_1944_brochure.html](#)

1940 – nascimento do LP – CBS

Era de ouro de Hollywood: King Kong (1933), E o vento levou (1936), O mágico de Oz (1939), Cidadão Kane (1941), Casablanca (1942) e da Disney: Branca de Neve (1938), Bambi (1942), Pinnochio e Fantasia (1940).

1945 – Enigma e Bomber

1947 – Invenção do transistor – Bell

[diagramas-fernando\transistor_lg.mov](#)

1948 – TV a cabo

1950 – calculadora Curta

http://www.vcalc.net/curta_simulator_en.htm

1951 – Primeiro computador comercial – Univac

MIT – Whirlwind – 1951

IBM AN/F SQ7 – 1o. CRT, light pen, 1o. modem 1300,

1953 – primeiros desenvolvimentos do Video Tape – Ampex

1953 – Definição do NTSC

1954 – Primeira transmissão colorida

1954 – Célula Solar (silício) – precursora do CCD

1956 – Primeira transmissão de video tape

1956 – Crescimento de silício

1957 – Satélite – Sputnik

[imagens\sputnik.wav](https://www.imagens.sputnik.wav)

1958 – Laser (é usado nos CD's e DVD's e transmite informações na fibra óptica)

1959 – Circuito integrado

1962 – primeira transmissão de TV via satélite – Telstar (primeiro satélite de comunicação).

[diagramas-fernando\telstar_lq.mov](#)

1963 – Cassete de áudio – Philips

Carry-Corder '150' shown 80% of actual size

Norelco® Cordless Tape Recorders

Norelco Carry-Corder® '150'

Tiny tape cartridge loads in seconds, records for an hour
 Revolutionary tape recorder, features reusable snap-in cartridges, one button control to start, stop, wind-/re-wind tape. Separate volume controls for record and playback. Weighs only 3 lbs. with 5 flashlight batteries. 1 1/4 ips constant speed capstan drive. Has dynamic microphone with detachable remote switch. Superior sound quality with frequency response of 100 to 7000 cps. Connections for recording and playback directly with radio, phono, TV or another

tape recorder. 7 1/4" x 4 1/2" x 2 1/4". **Prepacked in Deluxe Case** with 4 cartridges (each in a dust proof container with index card), microphone, fitted carrying case, mike pouch, patchcord and tape mailer. **CIRCLE 51 ON READER-SERVICE CARD**

Norelco Continental '101'

100% transistorized for on the spot record/playback... up to 2 hours on a single reel. 2 track 1 1/2 ips constant speed machine weighs 6 lbs. with 6 flashlight batteries. Features dynamic microphone, tone control, record/level/battery condition indicator. Includes direct recording patch-cord. Frequency response 80 to 8000 cps. 11" x 3 1/4" x 8". **CIRCLE 52 ON READER-SERVICE CARD**

1967 – Floppy Drive

1969 – Invenção do Mouse - Douge Englebert – Xerox

1969 – ARPANET – precursora da Internet

1970 – Display LCD (relógios)

1973 – Hard disk – IBM

Xerox Alto – 1973

Microsoft Bob 1985

Your computer may not seem friendly to you, but with Bob™, it will.

Because Bob features the newest thing in software: a social interface. Which is a fancy way of saying “a nice program that will make your computer comfortable and friendly to you.”

That's Bob.

Bob will help you write letters, balance your checkbook, keep a calendar, record addresses, play GeoSafari®, exchange electronic mail and access Windows®-based programs. What's more, you can customize Bob to work the way you want. Bob is one accommodating friend.

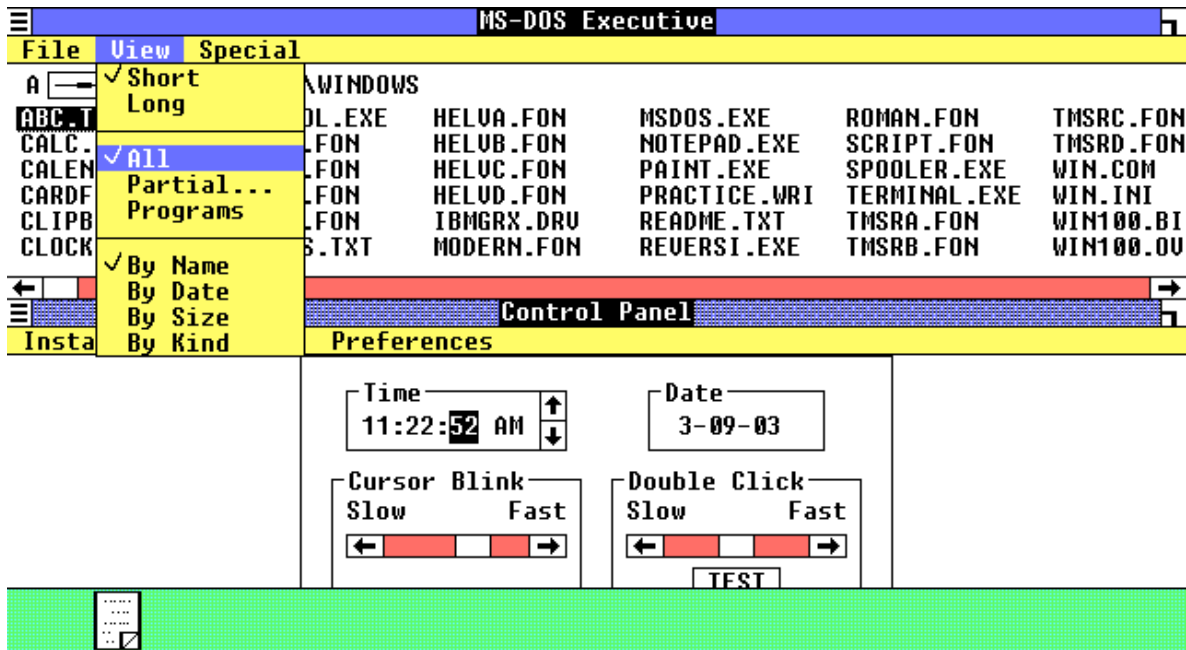

You need an 8-megabyte computer to operate Bob, but that's about all you need. Because Bob has personal guides—on screen animated characters—that lead you every step of the way. In fact, Bob is so easy to use, it doesn't even come with a manual. No manual. How friendly can you get?

To meet Bob for yourself, stop by a local software retailer. Just ask for Bob. Because with Bob, your computer can become your pal.

Haptics / Force Feedback

<http://www.immersion.com/index.php>

Detent – Notches associated with selection position

Used to mark fine or coarse increments or selections, detents can be customized in size, shape, and number to suit context-sensitive requirements.

Barrier – Sensation of hitting a hard stop

Barrier effects restrict the user's motion, and are useful for indicating first and last items, minimum and maximum, or the edge of an area. Range of rotation is programmable.

Hill – A plateau style of wide detent

A hill effect could be used for menu wraparound, letting the user know they have moved from last to first menu item. A hill can also be used to indicate a return from a sub-menu back to the main menu or to signal the crossing of a boundary.

Compound – Two or more effects such as barriers and detents

A compound effect, like small detents with a deeper center detent and barriers on both sides, would be appropriate for a balance control, for example. Compound effects help designers closely match tactile sensations to operational steps, which can enhance usability.

Spring – Force increases or decreases with handle position

A spring provides a good return-to-center or default position such as for a shuttle control used to regulate speed.

Damper – Force increases or decreases with controller speed

Damper effects create the sensation of drag or weight, and can be used to emulate the feel of high-quality controls such as those found on expensive audio equipment. A damper effect might also emulate a jog control used to move through video frames or data stacks.

Constant Force – Continuous force independent of position

Constant force can be used to simulate dynamics such as gravity, friction, or momentum.

Periodic – Vibration lasting for a set period of time

A periodic of sine, square, or triangular waves can be triggered by an event to alert users to a specific situation or control position.

Note: Not all haptic effects are possible on all TouchSense modules.
